

ExtremeCloud™ IQ User Interface Transition FAQ

This document provides frequently asked questions and answers for the transition of ExtremeCloud IQ to the new and updated user interface. Information relating to planned features is subject to change without notice and does not constitute any delivery commitment.

Updated: May 6th 2026

Key Points:

There are currently two UI options that are available to manage networks using ExtremeCloud IQ:

- ExtremeCloud IQ's **classic UI**
- ExtremeCloud IQ's **new UI**– which has been available since July 2025

To date, administrators have had the option of toggling between the current ExtremeCloud IQ classic UI and ExtremeCloud IQ new UI.

Important Milestones:

- Currently administrators are presented with the classic UI when initially logging into ExtremeCloud IQ. Beginning in July 2026, by default customers will be presented with the new UI but will have the option to toggle via the 9-dot menu back to the classic UI.
- The classic UI will no longer be available after Q4'CY2026.
- In Q4'CY2026, all customers will use the new UI.

Q: When is the transition from the classic UI to the new UI

A: Extreme is completing the transition to the new UI in Q4'CY2026.

At this time, the classic UI will no longer be available, and the new UI will be the sole interface used for network management.

The new UI has been available since July 2025 with the opportunity to toggle between the two interfaces as needed.

Q: Why is Extreme transitioning to the new UI?

A: ExtremeCloud IQ's new UI has been designed from the ground up to take full advantage of the benefits of modern, cloud-native architecture, which has the benefit of improved performance, scale, and responsiveness for network management use cases.

The new UI is built on a next-generation architecture that delivers:

- Improved performance and stability
- Streamlined workflows with a modern, and easier to use UI design
- Enhanced monitoring, troubleshooting, and visibility
- A scalable foundation aligned with Extreme's cloud-managed roadmap

Q: When does the classic UI stop being operational?

A: The last date that the classic UI will be operational is in Q4'CY2026, the exact date to be confirmed and will be communicated closer to the transition period.

Q: How will this change affect how administrators access their environment?

A:

- Users will continue to log in with their existing URL and login credentials to access ExtremeCloud IQ.
- No administrative action is required for this UI transition
- ExtremeCloud IQ's new UI will be the only available user interface for network management.

Q: What impact will this have to existing networks?

A: There will be NO IMPACT to existing networks.

- Network configurations, policies, data, permissions, and performance remain unchanged
- Only the UI experience is updated
- Administrators will manage and monitor their networks exactly as before, but now with a modernized interface

User guides and videos will be provided to assist administrators as they make the transition from the classic UI to the new UI.

Q: What benefits will the new UI provide?

A: ExtremeCloud IQ's new UI brings these new enhanced capabilities:

- Improved performance and stability
- Streamlined workflows, modern, and easier to use UI design
- Enhanced monitoring, troubleshooting, and visibility

- A scalable foundation aligned with Extreme's cloud-managed roadmap

This transition ensures customers experience the most modern, intuitive, and capable version of ExtremeCloud IQ.

Q: Will ExtremeCloud IQ Site Engine be impacted during the transition?

A: Administrators who have integrated Site Engine into ExtremeCloud IQ will see this capability delivered to the new UI before the transition date. Access to Site Engine and all its capabilities are supported and maintained with no changes.

Q: I have Extreme Platform ONE and currently can use the 9-dot to access the ExtremeCloud IQ classic UI. Will this change as well?

A: Current Extreme Platform ONE customers will see no change in their access in July. The classic UI will continue to be available from the Extreme Platform ONE 9-dot until the final transition which is scheduled for Q4'CY2026.

Q: Will administrators be able to access SD-WAN from the new UI?

A: Yes. administrators can access the SD-WAN solution via the 9-dot menu from either Extreme Platform ONE or from ExtremeCloud IQ's new UI.

Q: I currently do not see all features in the new UI. Is there a plan to bring in all of these options?

A: Extreme is focused on layering additional functionality into the new UI before the July 2026 and Q4'CY2026 transition periods. For July, we are focused on delivering the following and more:

- The Guest, WIPS, and Location features (formerly known as Essentials)
- Improved administrator roles and RBAC functionality
- Manual packet capture
- Controller, Tunnel Concentrator, and UCP onboarding

There are a handful of features that require additional time and development before we bring them forward to the new UI, which we will target after July 2026.

This list of features includes but is not limited to:

- PCI Reports
- Thread Monitoring
- Distributed Firmware Update
- Global Search
- More Filtering options

Q: Will the transition to ExtremeCloud IQ's new UI in Q4 CY2026 affect the operation of End of Service Life (EOSL) Access Points, such as the AP122, AP130, AP150W, AP230, AP250, AP630, or AP1130?

A: Per [Extreme Networks' Product Support and End of Life Policy](#), once a product has reached its End of Service Life date, all support services for the product are unavailable, including access to Extreme's Global Technical Assistance Center (GTAC), software releases, security fixes, and replacement parts; this remains unchanged regardless of the XIQ UI transition. EOSL APs that are operational and managed within ExtremeCloud IQ at the time of the transition may for an indeterminate period continue operating in accordance with their deployed configuration, maintaining client connectivity and policy enforcement. As Extreme Networks' platform continues to evolve, interoperability between EOSL hardware and ExtremeCloud IQ cannot be guaranteed over time, and customers are encouraged to evaluate whether their current AP infrastructure aligns with their long-term network and security requirements and consider transitioning to current Extreme AP models for full GTAC and software support and to take full advantage of the platform's latest capabilities.

As an existing customer of Aerohive APs, Extreme is offering a Special Upgrade Offer providing you with a 3-Year Extreme Platform ONE license bundled with Wi-Fi 6E & Wi-Fi 7 Access Points. This is a unique opportunity to replace your aging Aerohive Access Points with high performance Extreme APs designed for your current and future wireless demands plus the next generation network management platform with Extreme Platform ONE.

For any questions about how this transition may apply to your environment, please reach out to your Extreme account team to schedule a network health check and explore options tailored to your needs.

Q: Are there any features that are no longer going to be supported in the new UI?

A: As with any new software platform, Extreme's Product team evaluates features and capabilities that best meet our customer requirements as well as features and capabilities that are outdated or being replaced by advanced features. As such, we have identified features in the classic UI that will be retired with the new UI. These include:

- WiNG Controller Data in Connected Mode
- A3
- SR and Dell Switch support
- XR Routing Support
- Legacy Entitlement Keys (LEK)

Q: Are there any 3rd party switches that are no longer supported going forward in the new UI?

A: Per the [Extreme Networks' End of Service Life policy](#), interoperability of hardware with cloud management cannot be guaranteed after the hardware EOSL date. This applies similarly to Extreme Platform ONE, as well as ExtremeCloud IQ regardless of whether the new UI, or classic UI is used.

While the new UI will have full support for Extreme Switches, there are 3rd party HW Switches which are not manageable via the new UI. This includes:

- Aerohive SR Switches
- Dell Switches

If your network includes configured SR switches, they will remain operational, passing traffic with their existing configuration. However, administrators will no longer be able to onboard, configure, monitor, or troubleshoot these devices using the new UI. Device configuration and monitoring will still be available through the switch command line or the on-device web UI, with a CLI guide available for download. GTAC will continue to support the SR switch hardware through the end of service life date for the given model.

Already configured Dell switches will remain operational, passing traffic with their existing configuration. However, onboarding, configuring, monitoring, or troubleshooting these devices with the new UI will not be supported. Customers may contact Dell for alternative management solutions or support related questions.

Q: What will happen to XR Routers after the transition to the new UI?

A: Per the [Extreme Networks' End of Service Life policy](#), interoperability of hardware with cloud management cannot be guaranteed after the hardware EOSL date. This applies similarly to Extreme Platform ONE, as well as ExtremeCloud IQ regardless of whether the new UI, or classic UI is used.

XR Routers and APs operating in Router mode (AP150W and AP302W) will not be manageable in the new UI.

Already configured XR routers will remain operational, passing traffic with their existing configuration. However, onboarding, configuring, monitoring, or troubleshooting these devices with the new UI will not be supported. Device configuration and monitoring will still be available through the device command line, with a CLI guide available for download. GTAC will continue to support the XR router hardware through the end of service life date for the given model.

Q: What will happen to the VGVA after the transition to the new UI?

A: Per the [Extreme Networks' End of Service Life policy](#), interoperability of hardware with cloud management cannot be guaranteed after the hardware EOSL date. This applies similarly to Extreme Platform ONE, as well as ExtremeCloud IQ regardless of whether the new UI, or classic UI is used. The VGVA will reach end of service life on June 30, 2026.

While customers will not be able to manage the Extreme VGVA through the new UI, the Extreme VGVA will continue to operate with no impact on customer deployments. VGVA functions as a virtual VPN gateway that terminates L2 INXP or L2/L3 VPN tunnels independently of the management UI. The appliance continues to forward traffic and maintain Layer 2 INXP/VPN or Layer 3 VPN because its data plane functions run locally on the VM while the control plane exists between managed devices, so neither are dependent on UI elements for runtime behavior.

After the transition to the new UI, the VGVA remains fully accessible via CLI. In L3 mode, security hardening settings may need to be adjusted to allow SSH access. A CLI guide will be available for download.

Q: I have Cloud Subscription for SR switches and a VGVA that extends beyond the device end of service life date?

A: Pilot licenses are not tied directly to an individual device. If a Cloud subscription is being consumed by an SR switch or VGVA, that Cloud subscription is transferable to new switching hardware or to a supported Tunnel Concentrator.

FAQ about the Legacy Entitlement Keys (LEK):

Administrators who are currently using LEKs will be presented with this message when they log into ExtremeCloud IQ:

"Presence of Legacy Entitlement Key detected. Contact support to avoid service disruption by June 30th, 2026. [Learn more](#)"

Q: What is LEK?

A: The Legacy Entitlement Key (LEK) is an old license type equivalent to Pilot. Extreme stopped offering LEKs actively in 2020.

Q: What will happen with LEKs when ExtremeCloud IQ's classic UI is retired?

A: If you are currently using LEKs, you will not have access to the modernized ExtremeCloud IQ.

Q: What should I do if I have LEKs?

A: Contact Extreme's Global Technical Assistance Center. They will work with you and move LEK to contracts with the same start date, end date, and quantity.

Q: Will all LEKs be moved?

A: Only those that are valid and not perpetual will be moved.

FAQ About ExtremeCloud IQ Connect

Q: How will ExtremeCloud IQ Connect users be affected by the ExtremeCloud IQ's UI transition plan?

A: We do not expect the ExtremeCloud IQ classic transition plan to impact Connect users in the July time frame. However, users will only be able to continue using Connect through the Q4'CY2026, at which time ExtremeCloud IQ Connect will be deprecated. Connect customers will be notified about the changes at a future time, and they will be guided to acquire Extreme Platform ONE subscriptions in order to continue managing any Extreme Networks devices in their inventory that are not yet End of Service Life nor any other covered by exclusions elsewhere in this FAQ.

Q. What happens to Connect accounts in July?

A: Connect users will not be impacted and will only be able to continue using ExtremeCloud IQ Connect through Q4'CY2026.

Q. What happens to my external admin accounts?

A: If a login ID has a home account in the Connect tier and that login is used as an external admin to access other accounts, the user would not be able to log in and access the external account switcher. The Connect account must be linked to a CUID (Subscription account) in order for the user to continue accessing other accounts.

Q. What happens to their account in Q4'CY2026 ?

A: Users will lose access to ExtremeCloud IQ Connect and must link their account to a CUID (Subscription account) to continue managing the network.

Q. How are we notifying ExtremeCloud IQ Connect customers of the change?

A: Users will receive an email and an in-app notification about the transition.
